**DSC KIET**

Hey Flutter Dev

We hope you had an amazing time with us during the week-long Flutter Bootcamp. It's great to see you at this level, where you can build your own apps using flutter. Remember the day 1, when you started with the installation. Hell, no!! that was damn difficult, but you didn't give up and made it to the last day, where you learned about some really cool and core features of Flutter.

The exciting part comes here. Now, it's your turn to implement what you have learned and explore more as you go. Interact with your partners and friends who have attended the workshop, resolve errors and become a pro developer like your super cool fluttering instructors Aakanksha Shivani, Shubham Singh and Shubham Goswami.

So, here's your short task for this weekend. Create the below UI using Flutter (two mobile screens).

If you are interested to get the feedback of what you will implement, do come to our nest(our small, but lovely workspace) at 5:00 PM on Monday, 03/02/2020 in E-407. Best implementation will be given some cool goodies and a chance to a part of our DSC family.

Find some good resources, related to flutter at this [link](#)

Do flaunt your apps on social media, and don't forget to tag **@dsckiet**. Photos are important, aren't they?

We will soon conduct more workshops on flutter at the next level and other technologies in the upcoming weeks. So, stay tuned!! More content coming your way.

Regards
